

ABOUT ME

AUGUST 2022

I recently graduated in May, 2022, with a Bachelor's of Science in Biomedical Engineering on a pre-medicine track. I will be returning to the University of Buffalo to complete a Masters of Art in Biological Sciences, with a focus in Anatomy & Physiology.

I was based in the Bay Area this past summer, as I was an Assay Development Research Intern at Lucira Health. I am interested in the medical devices field, more specifically, orthopedic, and surgical devices. I am currently continuing to work on a 3D printed, anatomically correct hand that will be used for orthopedic surgical training, and cadaver research.

I would like to work full time in the Bay Area with a start date around June 2023.
